## Response to Amendment

1. This action is responsive to amendment received on 9/26/2005.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 1-17, 19-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Michels et al. (US 6,161,144).

Claims 1, 2, 12 and 17. Michels et al. ('Michels' hereinafter) disclose a network switching device 50 (figure 3), receiving network frames and passing the frames to the plurality of search engines 66... (search resources). The search engines determine ports for frames (see fig. 5, also see col. 1, lines 55-61) and transmit the search response, based on the packet request, to the forwarding ports. Michels further discloses primary memory 58 coupled to the switch. The memory 58 (session storage device) has lookup table used to locate iterations of the search, which in turn enable the switch to allow a session to be maintained across multiple packets (see figure 3 and col. 5, lines 26-37).

Michels does not specifically disclose a parser generating packet search request.

However, as one of ordinary skill in the art would realize that any router, switch or network (see figure 3) can be utilized for generating and forwarding a search request via media interface 56 (fig.3).

Application/Control Number: 10/005,596

Art Unit: 2667

Claims 3 and 4 Michels further discloses that media interface 56 reformats the frames in response to modification request form the network (see col. 4, lines 46-65).

Claims 5-6. Michels discloses a management processor coupled to search engines that maintains the lookup table in memories 58, 70 (fig.3) wherein search, by search engine, is performed depending on entries in the lookup table (shortest queue).

As to claim 6, already discussed that the media interface 56 allows the search engine to transmit the modified frames to particular network depending on decision logic 72 (col. 6, lines 29-57).

<u>Claim 7</u>. All the limitations, including packet resources (network) are already discussed in the rejection of claim1 above.

Claims 8, 10, 11, 13, 15, 16, 19, 21 and 22. Michels discloses that requests are made for packet search and to reformat or modify the packet based on search (see rejection of claims 3 and 4). A request to modify is inherent. Further, media interface 56 can functionally be considered as session device sending group of packets that are transmitted to another device or computer in the network (see col. 4, lines 58-65)

<u>Claim 9</u>. Network receiving packets via media interface 56 is already discussed in the rejection of claim1 above.

<u>Claim 14</u>. As discussed above forwarding decision logic 72 (fig.3) receives packet response form search engine (second means) and forwards the frames to the requested ports (see col. 6, lines 20-28).

Application/Control Number: 10/005,596

Art Unit: 2667

<u>Claim 20</u>. As discussed in the rejection of claim 1 above, the network switching device 50, disclosed by Michels, is used to transmit the packet response from the packet resource to the network (see figure 5).

## Response to Arguments

4. Applicant's arguments filed on 9/26/2005 have been fully considered but they are not persuasive. The Applicant argued that the cited art does not disclose added limitation of "a session storage device ........ multiple packets". However, Examiner maintains that the function of the claimed storage device is not novel or unique and any storage device, such as look up table or memory as discussed in the rejection of claim 1 above, can be configured by one skilled in the art to help forward the network frames as claimed herein.

In conclusion, claims 1-17, 19-22 remain rejected.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Application/Control Number: 10/005,596 Page 5

Art Unit: 2667

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Afsar M. Qureshi whose telephone number is (571) 272 3178.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi Pham can be reached on (571) 272 3179. The fax phone number for the organization where this application or proceeding is assigned is 571-273 8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
